Integrated Herriott cell in a free-standing Si membrane (schematic, not to scale): N = 22, M = 5, φ = 90°, d = 4.29 mm

Gas molecules (CH_4, CO_2, H_2O, NH_3; schematic): red halo = inside the evanescent field of the guided mode (red haze above the cell and tails on the cut faces), absorbs; no halo = farther out, no interaction
